

# CDI

## Clinical Documentation Improvement

The time to “tap the shoulder” of a provider about clinical documentation improvement is when their head is in the case – when they are looking at the subject patient in the EMR. **The IllumiCare Ribbon knows when that opportunity exists and serves up the query, unobtrusively in workflow.**

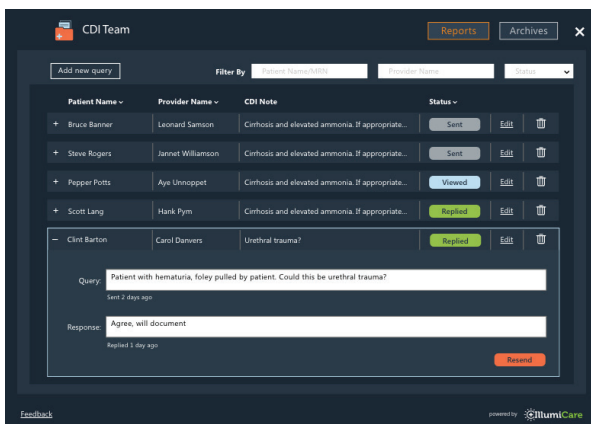

This gives providers the best of both worlds – queries that have been curated by the CDI team, asked at a time most convenient. The CDI app makes it easy for providers to meet administrative burdens while maintaining focus on their primary task – patient care.

## Closed-Loop and Offline

Given the time sensitive nature of CDI queries, you don't want them buried in providers' inboxes. The CDI app gives the CDI team a flexible and convenient way to formulate sophisticated queries while simplifying provider responses. Providers are “nudged” about CDI queries when that patient is in context in the EMR.

While you want CDI easily accessible for providers, not all queries are appropriate to be in the medical record, where they can now be included in the patient portal and elsewhere. As these are administrative queries, they should remain outside of the medical record. Because the IllumiCare Ribbon is a separate application not directly integrated with the EMR, conversations within it remain distinct.

### Convenient

- Simple query creation
- Providers see in workflow

### Timely

- Nudge when provider's head is in the case
- Views / responses tracked in real-time

### Effective

- Communicate outside of the formal record
- Closed loop tracking / reporting

## Other IllumiCare Apps Include:

**Trials** nudges providers at point of care when their patient matches the referral criteria set by the study coordinator. No complex EMR / BPA programming required!

**Stewardship** nudges providers with lower cost, clinically efficacious alternative meds & tests.

**Benchmarking** empowers each provider to compare their spending per admission with other providers in the same specialty.

**PDMP** provides a link to your state's PDMP database. It automatically transcribes patient demographic information within the app to quickly display your patient's PDMP report & opioid exposures.

**RxOffers** electronically sends prescription discount offers to patients. These offers may include copay assistance programs for branded medications, as well as cash pay offers for branded and generic medications.

**RxLightning** is a streamlined approach to prescribing, ordering, and tracking specialty medication and the enrollment process within the Electronic Health Record (EHR) workflow.

**UpToDate** app keeps clinicians logged into their account to seamlessly track accrued CME's. The knowledge contained in UpToDate is evidence based and continuously updated.

**Resources** is a repository that contains informational content (clinical resources and patient education) relevant to the patient being viewed in the EMR or content that has been previously saved by the user.
