

Gaps

Patients in at-risk populations tend to get their care from more than one provider. The Gaps app from IllumiCare automatically checks the patient you're viewing in the EMR against their documented quality and risk measures to ensure that no care or HCC coding gaps exist.

- If the patient is not in the ACO population the Care Gap icon check is blank
- If the patient is in the system and no care gaps exist a green check is shown
- If care gaps exist a red badge indicates the number of gaps that exist
- Clicking on the badge reveals the gaps
- Sending feedback to the ACO by marking a gap Documented, Not Appropriate, or Declined

Care Gaps is a free tool that lets physicians know what specific treatments the ACO requires for each patient. It automatically checks the status of a patient you're viewing in the EMR against the Silver State ACO documented quality measures.

Coding Gaps takes the guesswork out of identifying and properly coding your most vulnerable patients and keeps your practice in compliance.

For patients with chronic conditions doctors must code those conditions at least once a year. Failing to code properly can put your practice at risk of being downgraded, which could result in lower payments by payers. discovered conditions.

Other IllumiCare Apps Include:

Trials nudges providers at point of care when their patient matches the referral criteria set by the study coordinator. No complex EMR / BPA programming required!

Stewardship nudges providers with lower cost, clinically efficacious alternative meds & tests.

Benchmarking empowers each provider to compare their spending per admission with other providers in the same specialty.

PDMP provides a link to your state's PDMP database. It automatically transcribes patient demographic information within the app to quickly display your patient's PDMP report & opioid exposures.

RxOffers electronically sends prescription discount offers to patients. These offers may include copay assistance programs for branded medications, as well as cash pay offers for branded and generic medications.

RxLightning is a streamlined approach to prescribing, ordering, and tracking specialty medication and the enrollment process within the Electronic Health Record (EHR) workflow.

UpToDate app keeps clinicians logged into their account to seamlessly track accrued CME's. The knowledge contained in UpToDate is evidence based and continuously updated.

Resources is a repository that contains informational content (clinical resources and patient education) relevant to the patient being viewed in the EMR or content that has been previously saved by the user.
