

The Team Health Smart Ribbon

The Smart Ribbon, powered by IllumiCare, is a workflow-conscious ribbon of information that is displayed on top of a health system's electronic medical record (EMR) and gives providers real time, patient specific costs (not charges), risk and other custom data about the patient can currently being reviewed in the EMR. IT is a "ribbon" of actionable intelligence that appears momentarily on top of or within the EMR screen and is EMR agnostic. It has no alerts and requires no clicks, and if not manipulated, automatically fades away after several seconds as to not impede the EMR workflow.

Based on an analysis of Smart Ribbon clients' experiences, it was determined that, across all hospital admissions on a DRG-adjusted basis, there was a **14.2%** average reduction of inpatient medication costs, a **14.3% reduction** in inpatient lab costs, and a **5.6% reduction** of inpatient radiology costs per hospital. **Typical range of savings is \$48-136** per admission.

The TEAMHealth Smart Ribbon® displays different applications depending on patient location. Applications include:

 **Stewardship** teaches and reinforces a value mindset by exposing real hospital costs to clinicians and nudging in their clinical workflow when lower cost opportunities exist.

 **Length of Stay** compiles the clinical barriers to discharge, making it easy for clinicians to tick down the list if a patient is ready to go.

 **Ingenious Med** allows quick access to the Ingenious Med solution to provide comprehensive charge capture, improved coding compliance, and enhanced EHR documentation validation.

 **Observation** notifies providers, within the Smart Ribbon, of the amount of time a patient has been on obs status.

 **PDMP** provides a link to your state's PDMP database. It automatically transcribes patient demographic information within the app to quickly display a patient's PDMP report.

 **Spotlight** provides visibility of practice pattern variation among clinicians of the same type that drives over-utilization and higher costs.

 **Clinical Documentation Improvement** notifies clinicians of queries that have been curated by the CDI team.
