

## Blue Cross of Idaho Gaps

Patients in at-risk populations tend to get their care from more than one provider. The Gaps app from IllumiCare is a free tool that automatically checks the patient you're viewing in the EMR against their documented quality and risk measures to ensure that no care or HCC coding gaps exist.

Gaps Exist

No Gaps

Not a Member

- If the patient is not in the payer population the Gap icon check is blank
- If the patient is in the system and no care gaps exist a green check is shown
- If care gaps exist the Gap icon appears as a chart with orange lines and a red badge will appear indicating the number of gaps
- Clicking on the badge reveals the gaps
- Feedback can be sent by selecting the various buttons by the Chronic Conditions, Suspected Conditions and Quality Measures

**Chronic Conditions**

**Previously Coded Conditions (2)**

- Chronic Kidney Disease, Moderate (Stage 3) [Confirmed/Other] [Referred] [Dispute]

**Coding Gaps takes the guesswork out of identifying and properly coding your most vulnerable patients and keeps your practice in compliance.**

For patients with chronic conditions doctors must code those conditions at least once a year. Failing to code properly can put your practice at risk of being downgraded, which could result in lower payments by payers.

The Smart Ribbon hovers over your EMR and guides the medical staff to make evidence-based decisions

Update status on Chronic Conditions and Quality Measures with one click

**Quality Measure**

**Referred: Breast Cancer Screening**

Who was the patient referred to?
